

Xicato XTM and Zhaga

Zhaga Book 3 Form Factor¹

Xicato XTM

Zhaga is a consortium of manufacturers that have developed proprietary form factor and interface specifications that help facilitate a luminaire manufacturer's ability to substitute one manufacturer's LED source for another manufacturer's source. The scope of the specifications is limited to mechanical related interfaces, e.g. heat sink to module, optic to module. The specification does not address luminaire component *interoperability* in the field. In-field interoperability requires many more complex considerations such as thermal, photometric, and electrical compatibility.

Customers have asked that Xicato's Corrected Cold Phosphor Technology™ and unique quality of light be available in a Zhaga-compatible form factor so that they can more easily adopt Xicato into their luminaires and deliver a better quality of light to their customers. In addition to the two-hole Zhaga-compatible mounting, XTM has a three-hole mounting pattern for use with other Xicato-based components.

For more information on XTM Zhaga compatibility, please contact your [Xicato Account Manager](#).
